EDUCATION

California State Polytechnic University, Pomona, CA
Bachelor of Science in Computer Science
Minor in Data Science
GPA: 3.85

Aug 2020 – May 2024

EXPERIENCE

CALSys Lab, Pomona, CA

Data Science Research Assistant

Oct 2023 – May 2024

- Leveraged the Tor browser to securely access dark web forums and marketplaces, building a cyberinfrastructure to collect and store malicious hacking-related data in a PostgreSQL database.
- Collaborated in pairs using an agile approach to implement a translation component to foreign language websites, mainly Russian and Chinese, maximizing parsed content by 20%.
- Utilized TensorFlow, along with Selenium and BeautifulSoup, respectively for web crawling and parsing information.

Computer Science Department, Pomona, CA

CS Tutor

Nov 2023 – May 2024

- Instructed students in multiple Computer Science subjects during one-on-one sessions, while adapting to various learning styles.
- Consulted with faculty to align tutoring with classroom curriculum and advised students about educational/career trajectory.

PROJECTS

Jal Recommerce Website

Jun 2024 – Present

- Deployed an intuitive recommerce website with a team, which finds trending clothing from popular brands and provides alternatives on recommerce sites, while incentivizing the user with loyalty points.
- Developed the backend by scraping multiple shopping websites and integrating the Google Lens API to search for similar items.
- Designed and implemented the frontend using the React JavaScript library, and stored item information in a Django database.

Now Playing Website

Jun 2023 – July 2023

- Designed a website allowing users to easily access movie descriptions and streaming options using HTML, CSS, and JavaScript.
- Incorporated TMDB's API to dynamically access and display latest films and shows.
- Developed a backend API using MongoDB, while creating RESTful endpoints to allow users to write movie reviews.

Topical Search Engine

Oct 2023 – Dec 2023

- Designed an efficient topical search engine with a team that shows and ranks the top 5% of related results of a search query.
- Utilized MongoDB to crawl and store web pages, as well as using two information retrieval models to parse the website.
- Programmed in Python, while implementing BeautifulSoup, Scikit-learn, and NLTK library for lemmatization.

Store Management System

July 2022 – Aug 2022

- Delegated within a team to design a desktop application using the Model-View-Controller design pattern, making it easier to register customers, products, and orders, improving productivity by 15%.
- Programmed in Java using the evolutionary prototyping method, while leveraging PostgreSQL to manage the database and ensured quality control by writing unit tests with Junit.

TECHNICAL SKILLS

Languages:

- Python
- Java
- JavaScript
- HTML/CSS
- C/C++
- C#

Tools and Software:

- Visual Studio Code
- Tableau
- IntelliJ IDEA
- GitHub/GitLab
- Unity

Libraries and Frameworks:

- Selenium
- BeautifulSoup
- JUnit
- Bootstrap
- Pandas
- NumPy
- Scikit-learn,
- TensorFlow
- PyTorch
- React
- Socket.io

Databases and Applications:

- MySQL
- PostgreSQL
- NoSQL (MongoDB)
- Gantt Project
- Astah UML (Use cases)

RELEVANT COURSEWORK

- Web Search and Recommender Systems
- Software Engineering
- Data Structures
- Database Systems
- Analysis of Algorithms
- Machine Learning
- Object Oriented Programming
- Big Data Analytics/Cloud Computing
